

AGA TOKEN

How to Take Charge of Your Bitcoin Destiny

Let's be honest: investing in the world of cryptocurrency today can feel like stepping into the Wild West. You've been savvy enough to get into the game early but with the daily ups and downs and hysterical headlines from mainline media, it can make you doubt yourself.

“Do I stay put?”

“Do I pull out while I'm ahead?”

“Have I made the right decision?”

You're not alone. As an early adopter of Bitcoin, you know enough to get you this far, but you wonder if there's another strategy you should pursue to take better control of your financial destiny. Sure, you can try to “buy low, sell high” but is there a smarter way of investing?

Here's a little secret: I was just like you. I wasn't a cryptocurrency expert, but I could feel in my gut that this would be like the dawn of a new era, just how the Internet revolutionized our lives. Thanks to my work in the hi-tech industry — which led me to many strategic partnership discussions on blockchain and gave me foresight — I knew I couldn't just stay on the sidelines.

That's how AGA was born. Do You Mind Crypto? Yes, We Mine

Do You Mind Bitcoin? **Yes, We Mine**

Let me introduce you to the AGA: a cryptocurrency mining operation. We mine Bitcoin and other cryptocurrencies, via both Proof-of-Work and Liquidity Mining methods, offering community-oriented enthusiasts the opportunity to purchase AGA Token so they can be part of governing an actual Bitcoin mining and a Liquidity mining venture.

What are the benefits in investing in a AGA — and not directly in Bitcoin itself? You benefit from price appreciation when Bitcoin value increases. Additionally, for the times when Bitcoin's price is stable, AGA Token, combined with AGAr, offers high Annual Percentage Yield through liquidity pool bonus rewards, up to 24% in annual interest rate today.

And the more tokens you purchase, the more say you have. AGA governance members (those holding 10,000 or more AGA Tokens) have special clout and influence over our operations.

Lower Risk, Lower Cost

We mine, where electricity prices are amongst the lowest in the world. Launched in 2017, we are green-powered and aim to be carbon neutral by 2025.

As a profitable operation, we mine at a significantly lower cost than what is available in the open market. While mining costs have gone up recently, ours are stable because we outright purchased the bulk of our supercomputing machinery when the price was low, which translates to a lower cost for you today.

For Everyone

I knew I'd get your attention here. The AGA community wants to invite likeminded people to join. We do not cater to passive investors who are only keen on "buying low and selling high."

We are here to galvanize an active community of contributors and Bitcoin enthusiasts who actively seek to drive maximum return by governing an actual mining operation – one that is run by a small and nimble leadership team to whom you will have access.

When you purchase AGA Tokens, you become a community member and not a passive bystander. We genuinely welcome your feedback into mining operations, participation in public and private cryptocurrency forums; some of our members also blog and even upload instructional videos on YouTube.

We want you to actively share your journey, thoughts and experience through your sphere of influence as ultimately, this will help to grow AGA value.

And don't forget that being a community member also means reaping more financial rewards when you share your tokens in our liquidity pool.

Room for a Select Few

If you're a community-minded cryptocurrency enthusiast who's ready to up your game and take charge of your Bitcoin destiny, then consider joining the AGA family. We've saved room for you.
